How can I create a meaningful life?

This unique, five-session workshop series has helped over 600 graduate students and postdoctoral scholars find answers to this and other similar questions as they work through the often difficult processes of clarifying career choices that correspond with their life priorities, personal values, transferable skills, specific interests and individual strengths.

"This workshop empowered me with the self-knowledge and awareness to better envision where I would thrive professionally, and identify my skills and assets." ~ Winter 2017 Participant
